The designers of the Boston World Trade Center appropriately eschewed pared-down modernism for a more multi-cultural approach. Decorative façade and veil elements were employed in the overall design that provides natural ventilation, lighting and transparency. Fin-like brackets, clad in GKD's Futura 3110, appear to support deep Polynesian overhangs.

**Applications**

Transparent Metal Mesh Facades  
Specialty Metal Mesh Architectural Adornments

**Metal Fabrics**

Futura 3110

**System Components**

Frame
