

**Location**

Augsburg, Germany

**Date**

2002

**Architect**

Regina Schinesis

**Project Type**

Public Buildings and Arts

**North American Headquarters**

North America  
GKD-USA, Inc.

When driving around the entrance building to this underground transformer station, the shiny, stainless steel mesh constantly changes its appearance depending on the angle of viewing. The filigree wire mesh produces ever-changing moire effects, and appears opaque or transparent, depending on how the light falls on it. In sunshine it looks like shiny crystal; at night, spotlights transform it into a light installation in the park landscape.
