

Extended loop - eyebolts

Loops are formed from cables that extend beyond the metal fabric and are secured by loop clamps. A round tensioning bar is fitted through the loops and through eyebolts at the top and bottom, and is then secured to a bracket or fixture with threaded lock nuts. Equal loop spacing keeps tension forces well distributed.

Applications

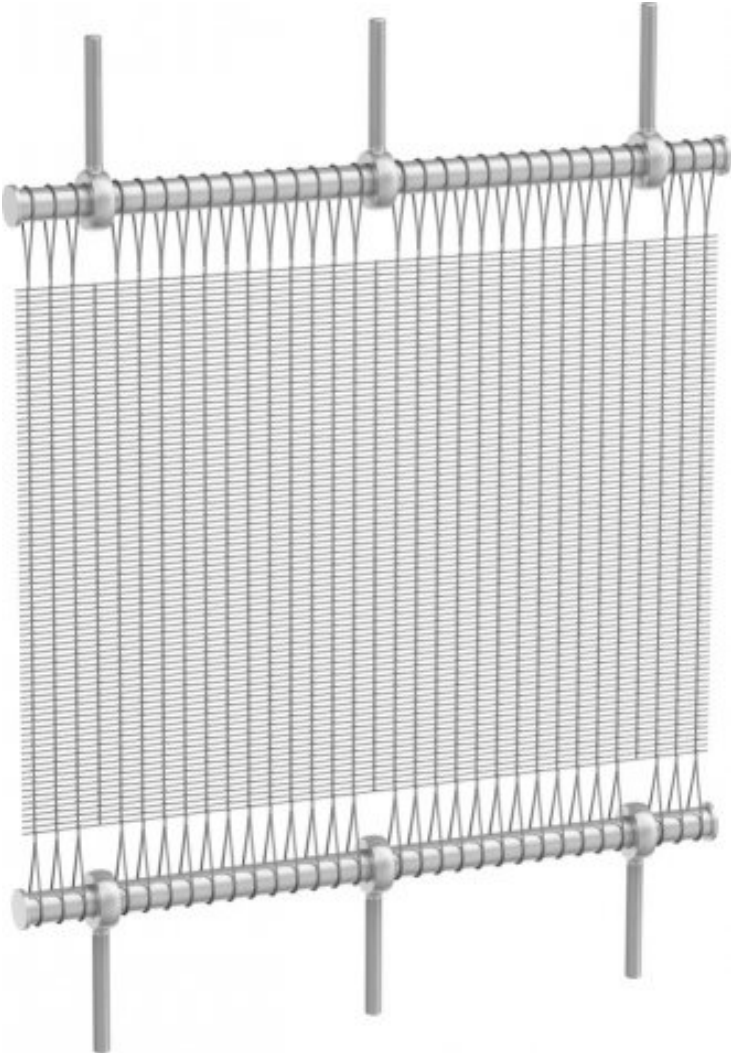

- Solar Mesh
- Transparent Metal Mesh Facades
- Etched Surfaces
- Suspended Metal Mesh Ceiling Panels
- Partitions

Metal Fabrics

- Futura 3110
- Omega 1510
- Omega 1530
- Omega Divergence
- Omega 1500
- Omega 1520
- Omega 1550
