

# Extended loops - hook at top

GKD BIM models and more at:

Loops are formed from cables that extend beyond the metal fabric and are secured by loop clamps. A round tensioning bar is fitted through the loops. At the top, the bar is hung from hooks. At the bottom, the bar is placed through eyebolts which are then secured to a bracket or fixture with threaded locking nuts. Equal loop spacing keeps tension forces well distributed.

### Applications

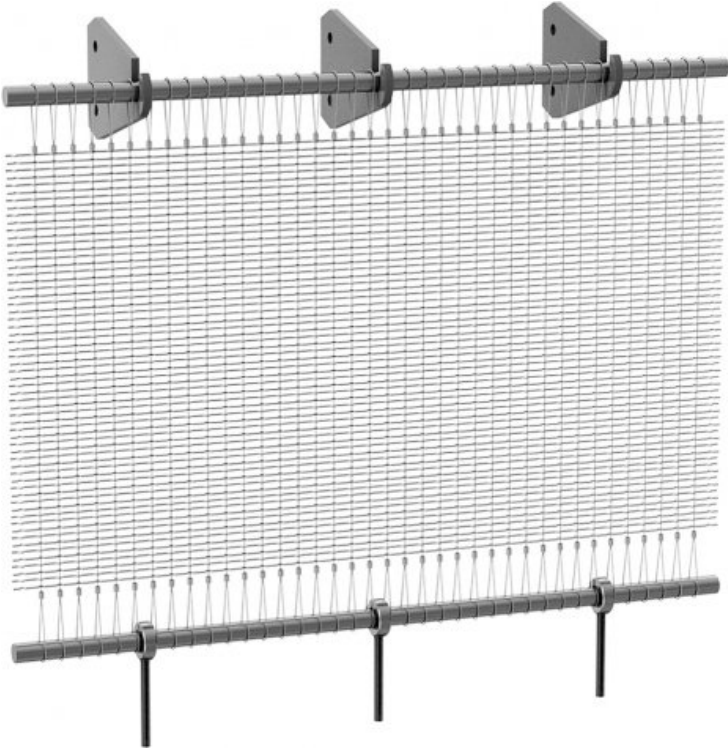

- Solar Mesh
- Parking Facades
- Transparent Metal Mesh Facades
- Etched Surfaces
- Partitions

### Metal Fabrics

- |             |                  |
|-------------|------------------|
| Futura 3110 | Omega 1500       |
| Omega 1505  | Omega 1510       |
| Omega 1520  | Omega 1530       |
| Omega 1550  | Omega Divergence |
