

GKD BIM models and more at:

A rigid frame requires attachment to a substructure. The metal fabric is clamped tight by bolts into a frame made of flat and angled bars. Various bar profiles can be considered. Pre-crimped fabrics can also be welded to frames. Fabric is not tensioned in this construction and to assure flatness, the panel size must be considered based on fabric selection.

Applications

Metal Mesh Wall Coverings
Column Covers
Metal Mesh Ceiling Panels
Safety and Security
Partitions

Metal Fabrics

Atlantic	Atlantic Bronze
Atlantic Lite	Baltic
Capella	Delta 16
Delta 30	Dolphin
