Weaves: Tigris

Attachment: Flats with Clevis

Architect: Woodhead International T.L.C. Architects

Application: Parking, Solar Control

Location: Adelaide, Australia

Market Segment: Transportation

DESCRIPTION

The challenge in designing the forecourt for Adelaide Airport was to find a material with the flexibility to follow the building shape that was also completely glare-free for pilots. The double-curved substructure was clad with GKD Tigris stainless steel mesh and serves as a distinctive landmark for the coastal city.
