PRODUCT SPECIFICATIONS

diameter: 1.1875 inches

height: 1.75 inches

APPLICATIONS

Facades

DESCRIPTION

Tensiomesh® is the newest innovation in metal mesh engineering and quality control. Consistent and correct tension is critical to ensuring woven metal fabrics maintain optimum performance and design qualities. GKD Tensiomesh is a patent pending quality control device that can be installed on the system's brackets to measure and ensure exact tension specifications. With this built-in scale, it provides visual confirmation that the tension is consistent throughout all of your panels and assures our customers of a quality product. If tension declines, fasteners can easily be tightened to the desired levels eliminating trial and error.
